

Net centre (Nätcentrum) in Sweden

Kriminalvården

The Swedish Prison and Probation Service

The Swedish Agency for Flexible Learning

Sweden is a country with a big area and quite a small population.

We have **comparatively** small prisons spread all over the country.

Until a couple of years ago the different prisons used to buy courses and education from private companies and municipalities.

The result was very diverse education standards and also that the inmates could rarely finish a course when moved between different prisons.

A new education policy was needed

Learning centre (Lärcentrum)

Some years ago the Swedish Prison and Probation Service started to employ teachers **in** local *learning centers* (Lärcentrum).

On a national basis the local learning centers are organized as one big learning centre.

The use of flexible learning and teachers around the country educating in different subjects, both **locally** and on distance, **support** the students in the learning process.

A student can have a teacher from **anywhere in the country** and keep that teacher when moving from one prison to another.

To support this a communication system called "Net centre" (Nätcentrum) was developed.

What we have:

Students

- All over the country
- Different background
- Different needs
- "Mobile"

Teachers

- All over the country
- Different competence
- In need of cooperation

Nätcentrum

(Net centre)

- Documentation
- Communication

The heart of the Communication system is a firewall which divides the signal from the Internet into two subnets.

One for the teachers and one for the students.

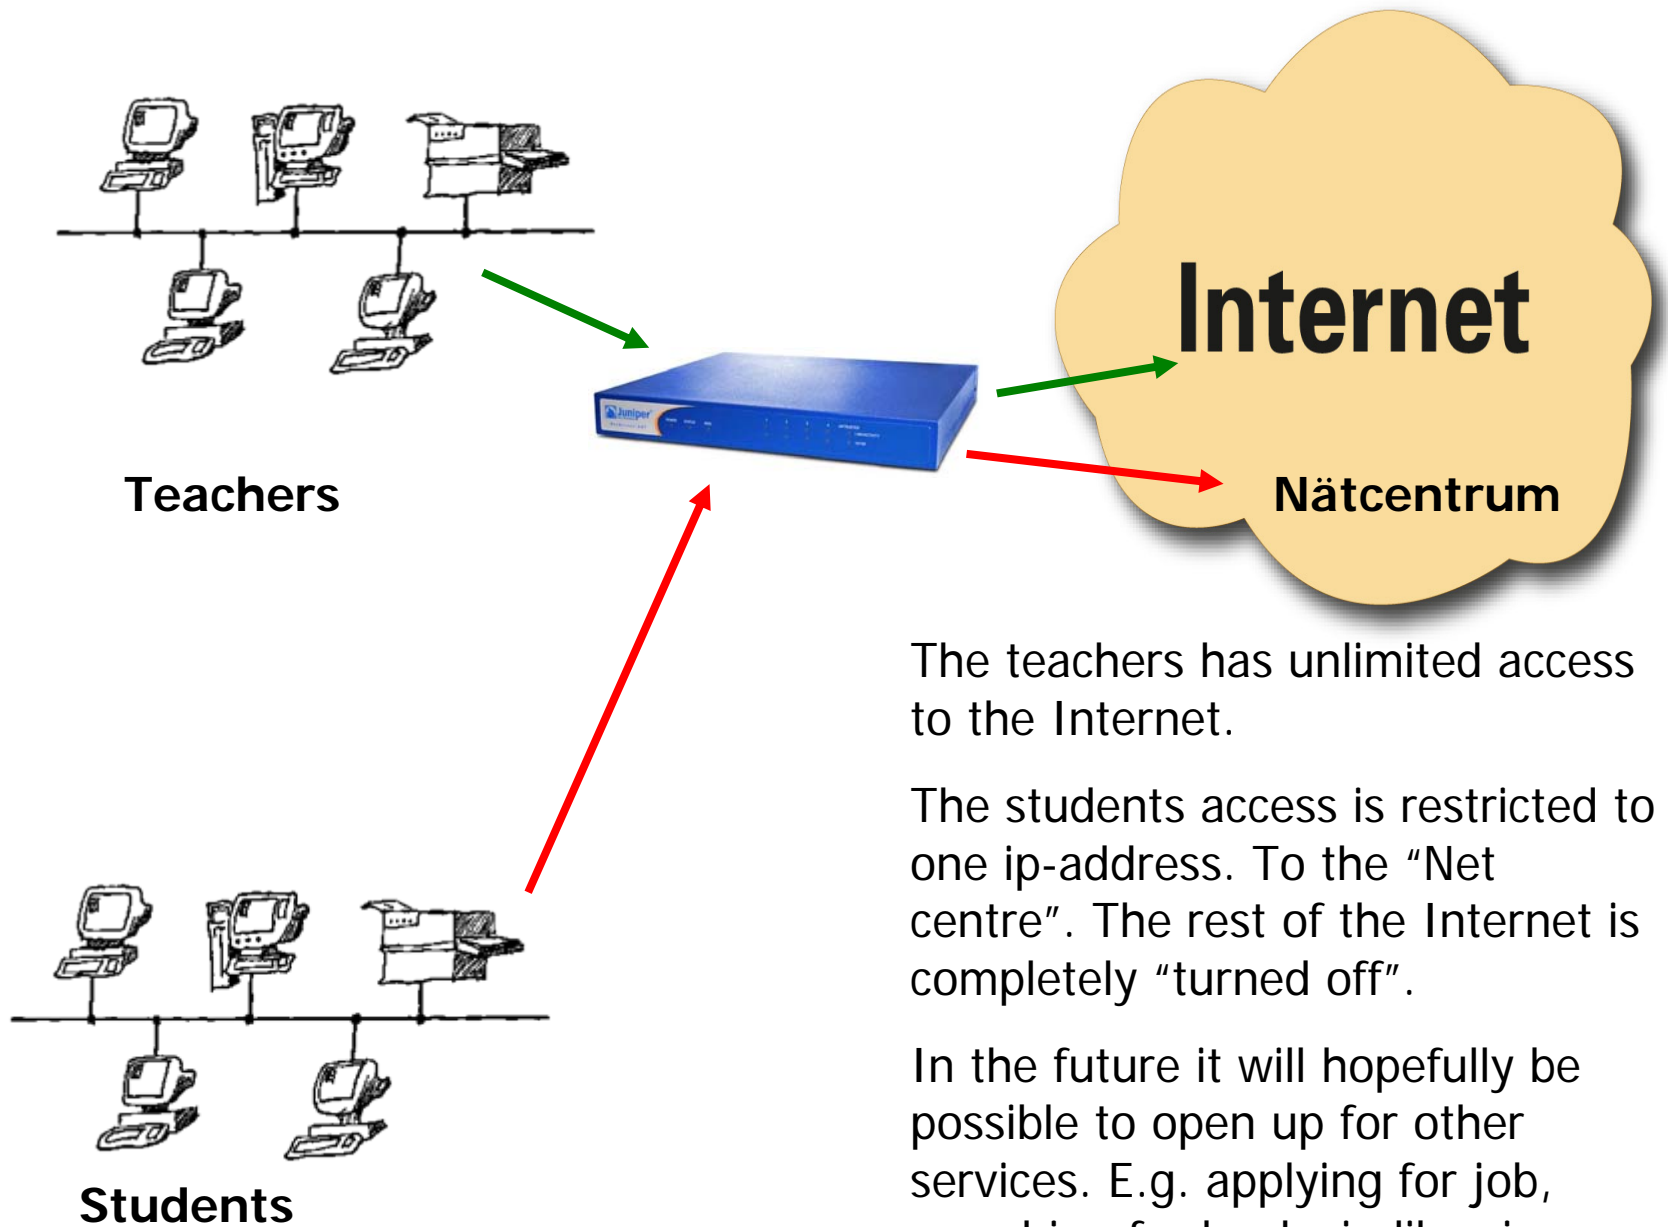

Teachers

Students

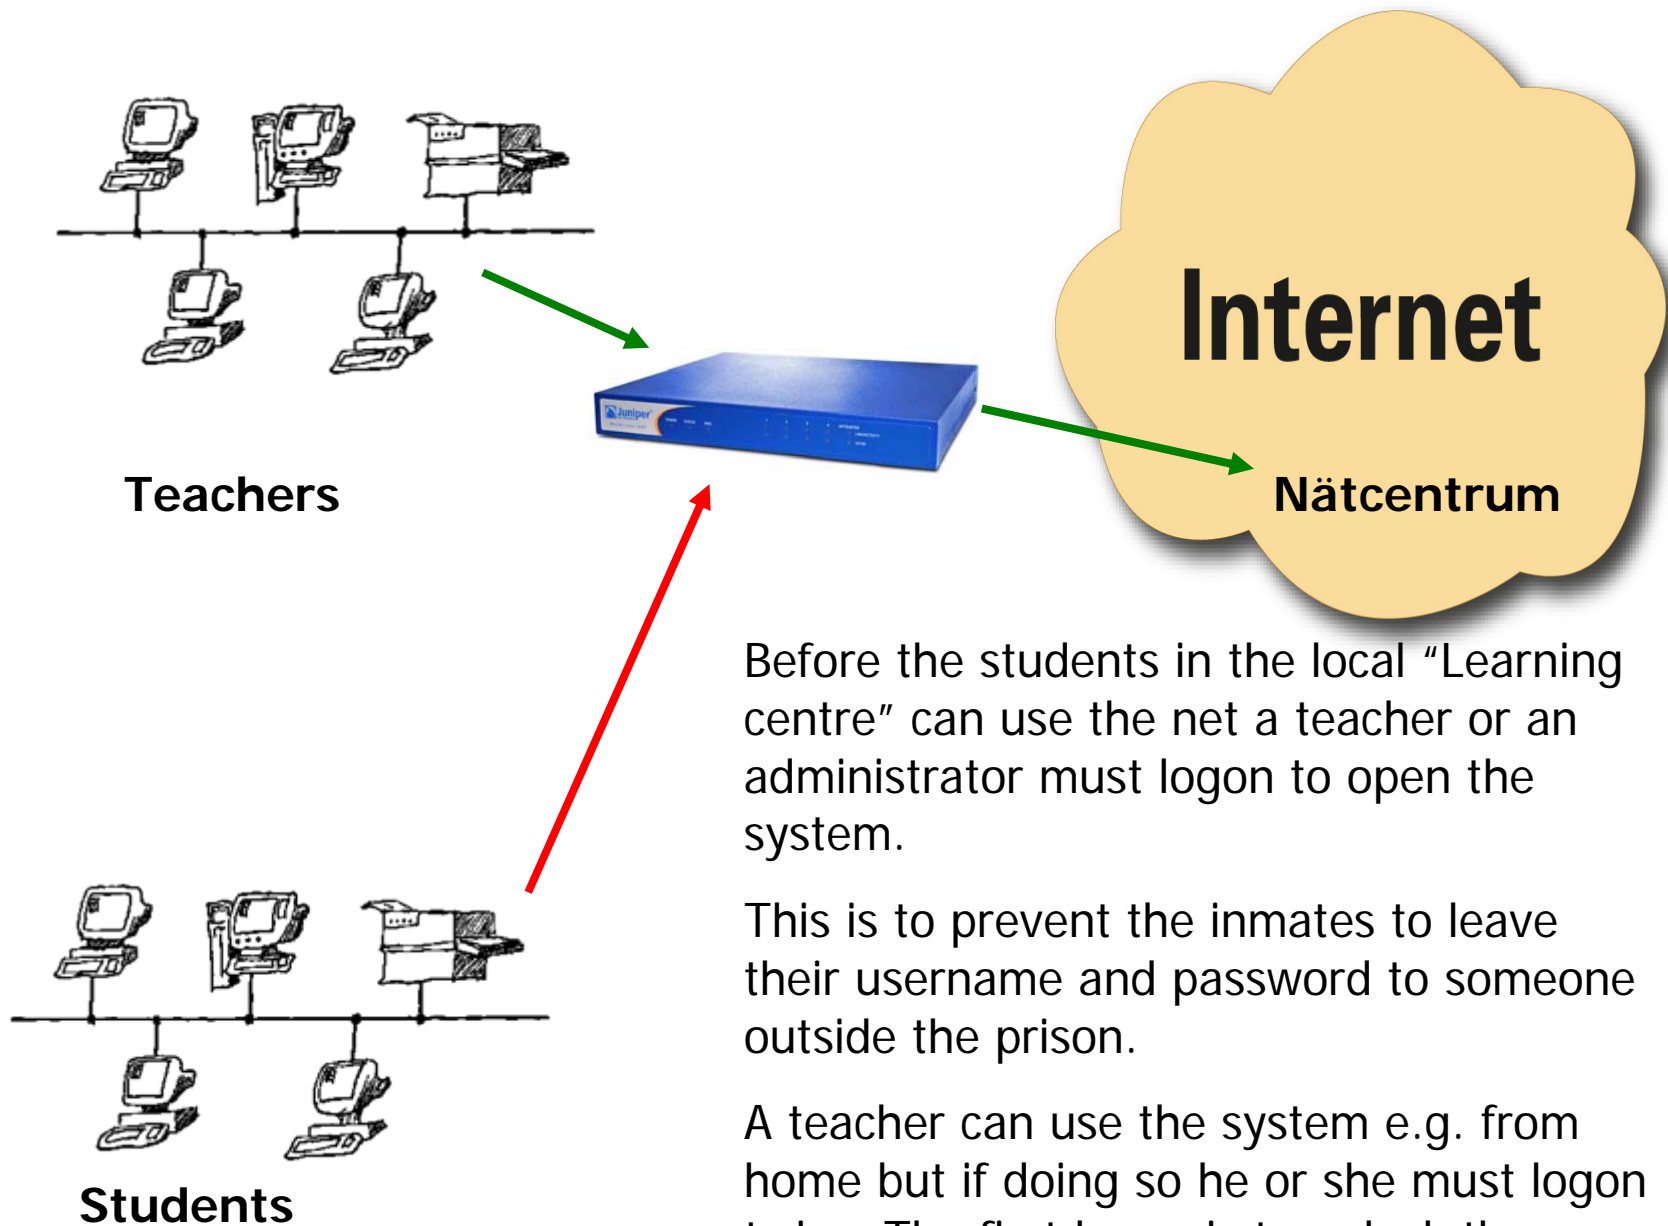

*"No, you weren't downloaded.
You were born."*

The teachers has unlimited access to the Internet.

The students access is restricted to one ip-address. To the "Net centre". The rest of the Internet is completely "turned off".

In the future it will hopefully be possible to open up for other services. E.g. applying for job, searching for books in libraries or doing tests on the European computer driving license.

Before the students in the local "Learning centre" can use the net a teacher or an administrator must logon to open the system.

This is to prevent the inmates to leave their username and password to someone outside the prison.

A teacher can use the system e.g. from home but if doing so he or she must logon twice. The first logon is to unlock the system to their home computer.

Net centre is used to register students and courses, the students personal curriculum plans and there results.

It is also used for communication between one teacher and one student when they are not in the same place.

When a student needs a teacher on distance we create a virtual room for communication.

Only one student gets access to the room. So it's used for communication between two persons. One teacher and one student.

In the room the teacher can place different kinds of material. E.g. a Word-dokument, a movie-clip or a sound-file.

The room also contains a forum in which the teacher and the student can discuss different topics. It is also possible to attach a file to a message in the forum.

This is a very brief presentation of how we use Net centre for secure communication via the Internet.

For further information please contact:

We cooperate with:

Netcompetence Sweden AB (www.netcompetence.se) host for Net centre
